# What is Information Service Engineering?

- **Information Service Engineering** investigates **models and methods**
  - to **analyze and integrate structured and unstructured distributed data** from **heterogeneous data sources**
  - with the goal to provide **up-to-date and reliable information services.**
- To this end, **Information Service Engineering** applies
  - both **statistical and linguistic analysis** methods in combination with
  - **machine learning and symbolic knowledge representation**
  - to enable the **implementation and sustained provision of intelligent information services.**

# What is Information Service Engineering?

- **Information Service Engineering** investigates models and methods
  - to analyze and integrate structured and unstructured distributed data from heterogeneous data sources
  - with the goal to provide **unbiased and reliable information services.**
- To this end, **Information Service Engineering** applies
  - both **statistical and linguistic analysis** methods in combination with
  - **machine learning** and **knowledge representation**

Band 6: Meeressäuger, Teil I: Wale und Delphine – Cetacea, Teil IB: Ziphidae, Kogiidae, Physeteridae, Balaenidae, Balaenopteridae. Aula-Verlag Wiesbaden 1995

[Natural history of the cetaceans and other marine mammals of the western coast of North America](#) (1872) by Charles Melville Scammon (1825-1911). [Public Domain]

# Data

- **Data** is raw.
- It simply exists and has **no significance** beyond its existence (in and of itself).
- It can exist **in any form**, usable or not.

# Information

- **Information** is data that has been given **meaning** by way of **relational connection**.
- This "meaning" can be **useful**, but does not have to be.
- **Information** is **contained in descriptions**, answers to questions that begin with such words as *who, what, when, where, and how many*.

# Knowledge

- **Knowledge** is the appropriate collection of information, such that its intent is to be **useful**.

# Wisdom

- **Wisdom** is the ability to make sound judgments and decisions.
- Data transforms to **information** by *convention*, **information** to **knowledge** by *cognition*, and **knowledge** to **wisdom** by *contemplation*.

# Knowledge Mining

understanding principles

(*why?, what is best?, doing things right*)

collective application of knowledge in context

understanding patterns

(*principles: how to?*)

experience, context, value applied to a message

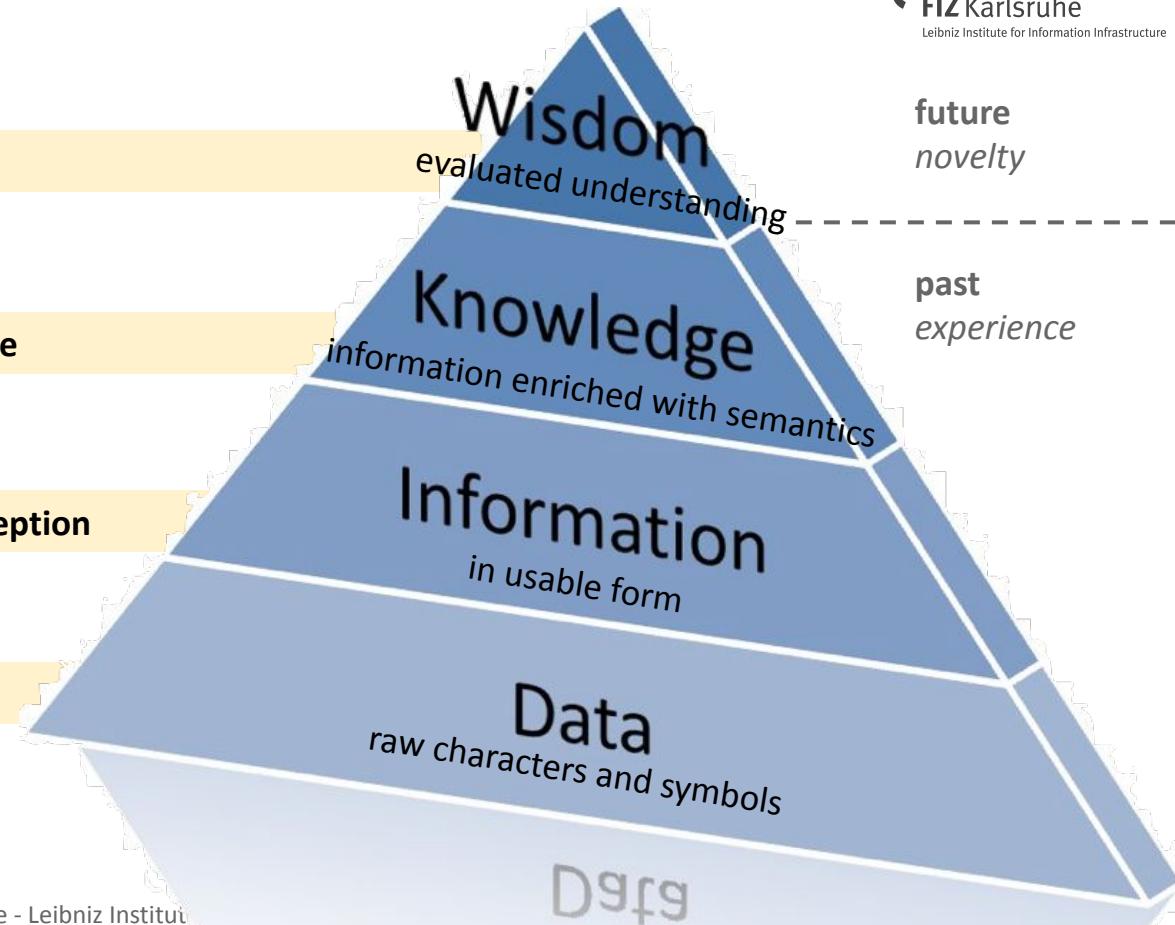

understanding relations

(*description: what?*)

a message meant to change the receivers perception

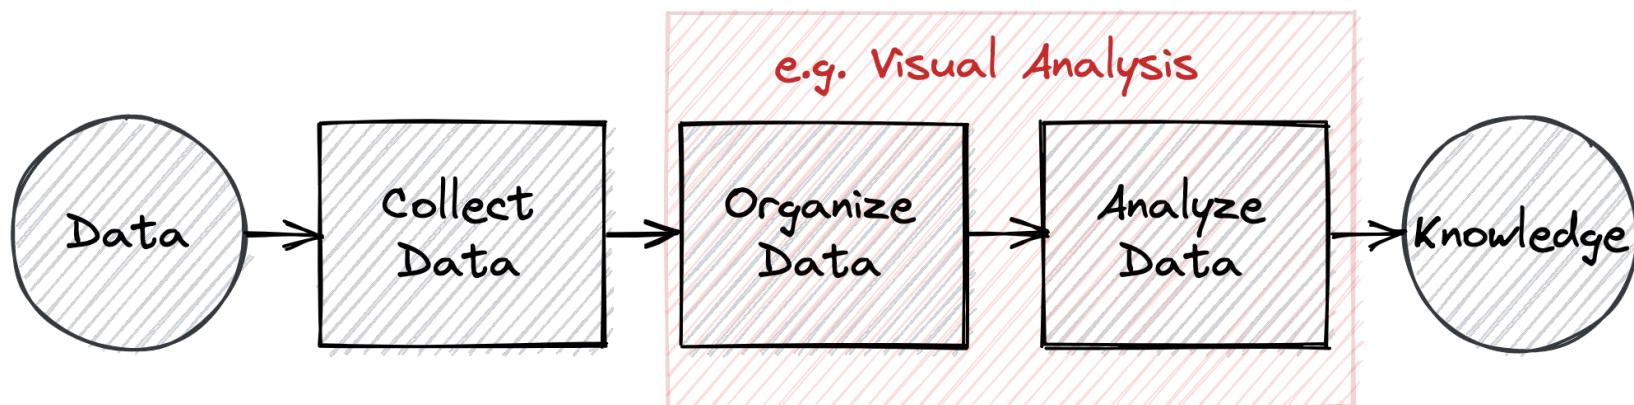

discrete objective facts about event

DIKW Pyramid, Ackoff 1989 [1]

# Data and Knowledge Mining

- How do we transform **data** into **knowledge**?
  1. Collect Data
  2. Organize Data
  3. Analyze Data

# Carte Figurative des pertes successives en hommes de l'Armée Française dans la campagne de Russie 1812-1813.

Dessiné par M. Minard, Inspecteur Général des Ponts et Chaussées en retraite.

Paris, le 20 Novembre 1869.

Les nombres d'hommes présents sont représentés par les largeurs des zones colorées à raison d'un millimètre pour dix mille hommes; ils sont de plus écrits en travers des zones. Le rouge désigne les hommes qui entrent en Russie; le noir ceux qui en sortent. — Les renseignements qui ont servi à dresser la carte ont été puisés dans les ouvrages de M. M. Chier, de Séjourné, de Fezensac, de Chambray et le journal inédit de Jacob, pharmacien de l'Armée depuis le 28 Octobre.

Pour mieux faire juger à l'œil la diminution de l'armée, j'ai supposé que les corps du Prince Jérôme et du Maréchal Davout, qui avaient été détachés sur Minsk et Mohilow et se rejoignent vers Orscha en Witebsk, avaient toujours marché avec l'armée.

# A Picture is Worth a Thousand Words...

- Pictures have been used to convey information long before the development of writing.
- A single picture can be processed (“understood”) much faster than a (linear) text page.
- Human perception is processing in **parallel**, text analysis is limited by the **sequential** process of reading.

# Information Visualization

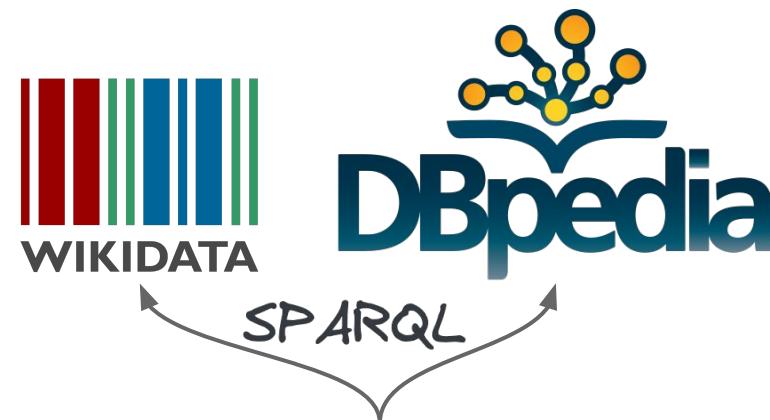

- **Information Visualization** is the study of (interactive) visual representations of abstract data to reinforce human cognition.
- **Information graphics** or **infographics** are graphic visual representations of information, data or knowledge intended to present information quickly and clearly.
- Infographics are a static form of information visualization that aims to emphasize specific findings gained from the visualized data.
- **Mandatory precondition:** Data Analysis.

# A Quick Data Visualization Example

## Workflow

- **Dataset Generation:**  
Knowledge Graph Mining
- **Task:**  
Draw a **map chart** which visualizes the **number of women soccer players per country.**

Geo Chart

## Dataset Generation

- How to create a SPARQL Query to extract all data about female soccer players from DBpedia?
  - Look up a famous example you know at Wikipedia

**Marta (footballer)** [https://en.wikipedia.org/wiki/Marta\\_\(footballer\)](https://en.wikipedia.org/wiki/Marta_(footballer))

From Wikipedia, the free encyclopedia

*This name uses Portuguese naming customs: the first or maternal family name is Vieira and the second or paternal family name is da Silva.*

**Marta Vieira da Silva** (born 19 February 1986), commonly known as **Marta** ([ˈmarta]), is a Brazilian footballer with both Brazilian and Swedish citizenship.<sup>[2]</sup> She plays for the **Orlando Pride** in the **National Women's Soccer League** and the **Brazil national team** as a **forward**. She holds the record for most goals in Brazilian International Football, male or female, with 109 goals for her country. With 17 goals, she also holds the record for most goals scored in the **FIFA World Cup** tournament (women's or men's).<sup>[3][4]</sup> Moreover, she is the first footballer of either gender to score at five World Cup editions,<sup>[5]</sup> a feat matched by **Christine Sinclair** in 2019.<sup>[6]</sup> At a club level, Marta won the **UEFA Women's Cup** at Swedish club **Umeå IK** in 2004 and won seven Swedish league championships during her time playing for various teams in the country.

Marta is often regarded as the greatest female footballer of all time.<sup>[7][8][9][10]</sup> She has been named **FIFA World Player of the Year** six times, five of them being consecutive (from 2006 through 2010) and the latest award coming in 2018. She was a member of the Brazilian national teams that won the silver medal at the **2004** and **2008 Summer Olympics**. She was also awarded the Golden Ball (**MVP**) at the **2004 FIFA U-19 Women's World Championship** and won both the Golden Ball award as the best player and the Golden Boot award as the top scorer in the **2007 Women's World Cup** after leading Brazil to the final of the tournament.

In January 2013 she was named as one of the six Ambassadors of the **2014 FIFA World Cup** in Brazil, alongside **Amarildo**, **Bebeto**, **Carlos Alberto Torres**, **Ronaldo** and **Mario Zagallo**.<sup>[11]</sup> She also appeared in the **Sveriges Television** television documentary series **The Other Sport** from 2013.

In August 2016, Marta was one of the eight to carry the Olympic Flag in the **Olympic Games** in Rio de Janeiro.

She was appointed by the **Secretary-General of the United Nations** as a **Sustainable Development Goals** advocate. The SDG are 17 global goals set with hopes of making the world a better place, and 17 advocates were appointed to help accomplish it.

## About: Marta (footballer)

An Entity of Type : soccer player, from Named Graph : <http://dbpedia.org>, within Data Space : dbpedia.org

Marta Vieira da Silva (born 19 February 1986), commonly known as Marta ([marte]), is a Brazilian footballer who plays for the Orlando Pride in the National Women's Soccer League and the Brazil national team as a forward. With 17 goals, she holds the record for most goals scored at FIFA World Cup tournaments. Moreover, she is the first footballer of either gender to score at five World Cup editions, a feat matched by Christine Sinclair in 2019. In August 2016, Marta was one of the eight to carry the Olympic Flag in the Olympic Games in Rio.

# Knowledge Mining and Knowledge Discovery

## Definitions

**Knowledge Discovery [in Databases] (KDD)** is the nontrivial process of identifying **valid**, **novel**, **potentially useful**, and **ultimately understandable patterns** in (massive) data sources.

(Fayyad et al, 1996)

- **valid**: to a certain degree the discovered patterns should also hold for new, previously unseen problem instances.
- **novel**: at least to the system and preferable to the user.
- **potentially useful**: they should lead to some benefit to the user or task.
- **ultimately understandable**: the end user should be able to interpret the patterns either immediately or after some post-processing.

# Knowledge Mining and Knowledge Discovery

## Goals

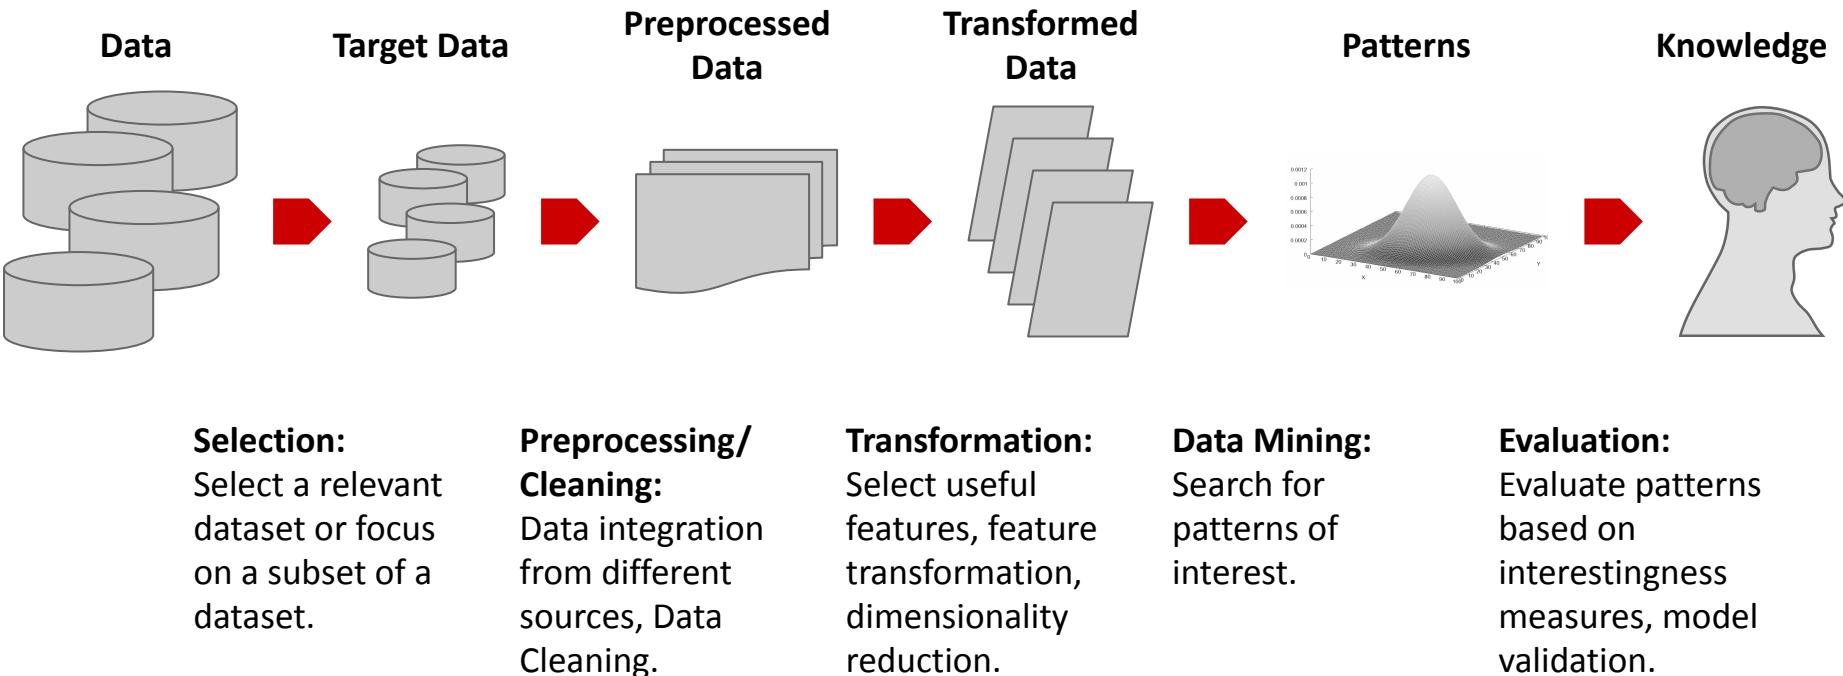

**Knowledge Discovery [in Databases] (KDD)** is the nontrivial process of identifying **valid, novel, potentially useful, and ultimately understandable patterns** in (massive) data sources.

(Fayyad et al, 1996)

- **Goals:**
  - **Descriptive Modelling:** explains the characteristic and the behaviour of the observed data.
  - **Predictive Modelling:** predicts the behaviour of new data based on some model.
- **Important:**
  - The extracted model/pattern does not have to apply in 100% of the cases.

# Knowledge Mining and Knowledge Discovery

## Process Workflow

# Data Cleaning

- “**Dirty**” Data:
  - Dummy values, absence of data, contradicting data, etc.
- Steps in Data Cleaning
  - **Parsing:** locates and identifies individual data elements in raw data.
  - **Correcting:** corrects parsed individual data components using sophisticated data algorithms.
  - **Normalization:** applies conversion routines to transform data into standard formats.
  - **Matching:** searching and matching records within and across data based on predefined rules.
  - **Consolidating:** merges data into one representation.

# Knowledge Mining Functionality

- **Characterization:** summarizing general features of objects in a target class (concept description).
- **Discrimination:** comparing general features of objects between a target class and a contrasting class (concept comparison).
- **Association:** studying the frequency of items occurring together.
- **Prediction:** predicting some unknown or missing attribute values.
- **Classification:** organizing data in given classes based on attribute values (supervised).
- **Clustering:** organizing data in classes based on attribute values (unsupervised).
- **Outlier analysis:** identifying and explaining exceptions (surprises).
- **Time-series analysis:** analyzing trends and deviations.

# Data Analysis

- **Data Analysis** is a fundamental iterative process:
  1. Formulation and execution of a query
  2. Analysis of the results
  3. Formulation of a consecutive query based on the achieved results
- **Goals of Data Analysis:**
  - Maximize understanding of analyzed data
  - Uncover hidden structures/patterns
  - Extraction of important variables
  - Detection of anomalies and outliers
  - Testing of hypotheses
  - Development of a simple model

Let's create a  
(complicated)  
**SPARQL query**

# Let's Analyze (More) Soccer Data

## 2. Get Data

Compose a Wikidata SPARQL query according to our needs.

```
SELECT (COUNT(?team_statement) as ?teams) (SUM(?goals) as ?total_goals)
       (SUM(?matches) as ?total_matches) (COUNT( DISTINCT ?citizenship) as ?total_citizenships)
       (SAMPLE(?height) as ?height) (SAMPLE(?weight) as ?weight) (SAMPLE(?posLabel) as ?pos)
       (SAMPLE(xsd:date(?birthdate)) as ?bdy) (COUNT(DISTINCT ?occupation) as ?sidejobs)
       (SUM(?link) as ?importance)
WHERE {
  ?s wdt:P106 wd:Q937857 ;
    wdt:P21 wd:Q6581072 ;
    p:P54 ?team_statement ;
    wdt:P2048 ?height ;
    wdt:P2067 ?weight ;
    wdt:P413 ?pos ;
    wdt:P569 ?birthdate ;
    wdt:P27 ?citizenship ;
    wdt:P106 ?occupation ;
    wikibase:sitelinks ?link.
  ?team_statement pq:P1351 ?goals ;
    pq:P1350 ?matches .
  ?pos rdfs:label ?posLabel FILTER (lang(?posLabel)="en") .
} GROUP BY ?s
```

[SPARQL query](#)

# Let's Analyze (More) Soccer Data

## 2. Get Data

Compose a Wikidata SPARQL query according to our needs.

Wikidata Query Service Examples Help More tools English

```

1 SELECT (COUNT(?team_statement) as ?teams) (SUM(?goals) as ?total_goals) (SUM(?matches) as ?total_matches) (COUNT( DISTINCT ?citizenship) as ?total_citizenships)
2   (SAMPLE(xsd:date(?birthdate)) as ?bday) (COUNT(DISTINCT ?occupation) as ?sidejobs) (SUM(?link) as ?importance)
3 WHERE {
4   ?s wdt:P106 wd:Q937857 ;
5     wdt:P21 wd:Q6581072 ;
6     p:P54 ?team_statement ;
7     wdt:P2048 ?height ;
8     wdt:P2067 ?weight ;
9     wdt:P413 ?pos ;
10    wdt:P569 ?birthdate ;
11    wdt:P27 ?citizenship ;
12    wdt:P106 ?occupation ;
13    wikibase:sitelinks ?link.
14
15 ?team_statement pq:P1351 ?goals ;
16           pq:P1350 ?matches .
17 ?pos rdfs:label ?posLabel FILTER (lang(?posLabel)="en") .
18 } GROUP BY ?s
  
```

# Excursion: Learn How to Read Boxplots

The **median** is the value separating the higher half from the lower half of a data sample.

X0

Min.	:	-86.00
1st Qu.	:	3.00
Median	:	17.00
Mean	:	38.85
3rd Qu.	:	51.00
Max.	:	1329.00

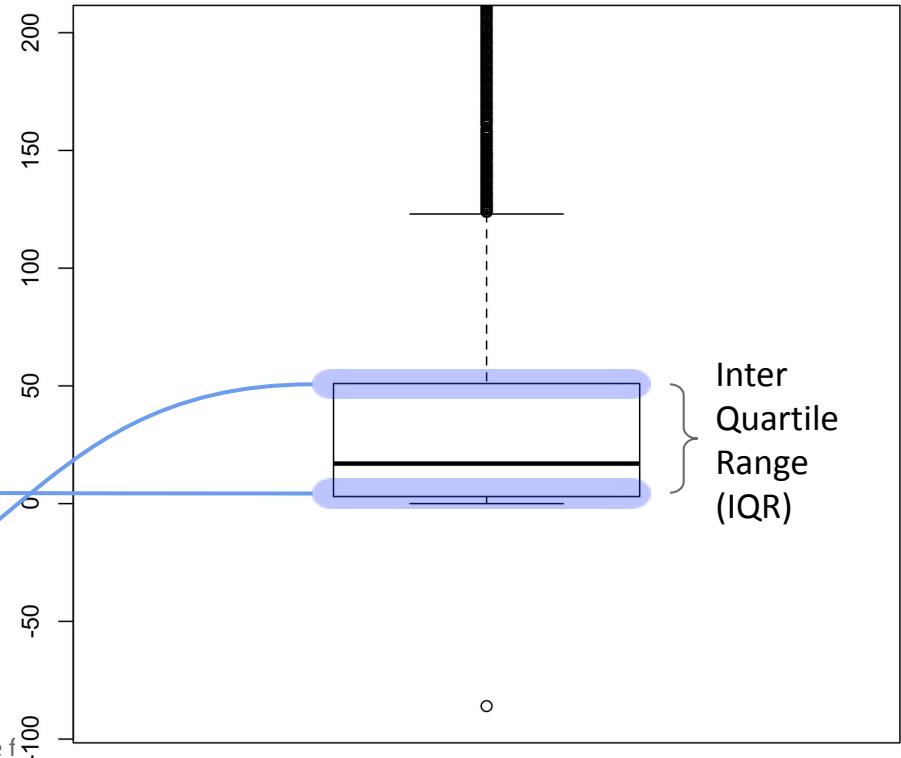

# Excursion: Learn How to Read Boxplots

The **first quartile ( $Q_1$ )** is defined as the middle number between the smallest number and the median of the data set.

The **third quartile ( $Q_3$ )** is the middle value between the median and the highest value of the data set.

X0
Min. : -86.00
1st Qu.: 3.00
Median : 17.00
Mean : 38.85
3rd Qu.: 51.00
Max. : 1329.00

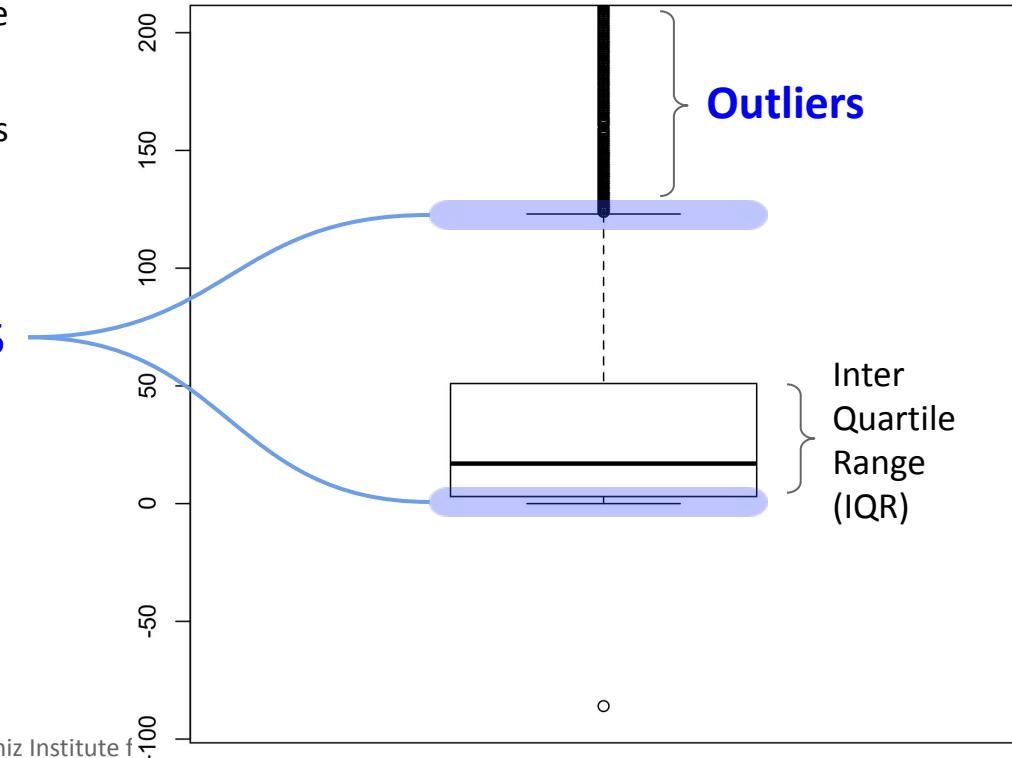

# Excursion: Learn How to Read Boxplots

**Whiskers** are indicating variability outside the upper and lower quartiles.

Any data not included between the whiskers should be considered as an **outlier**.

$$\text{Whiskers: } \text{IQR} \times 1.5 = (Q_3 - Q_1) \times 1.5$$

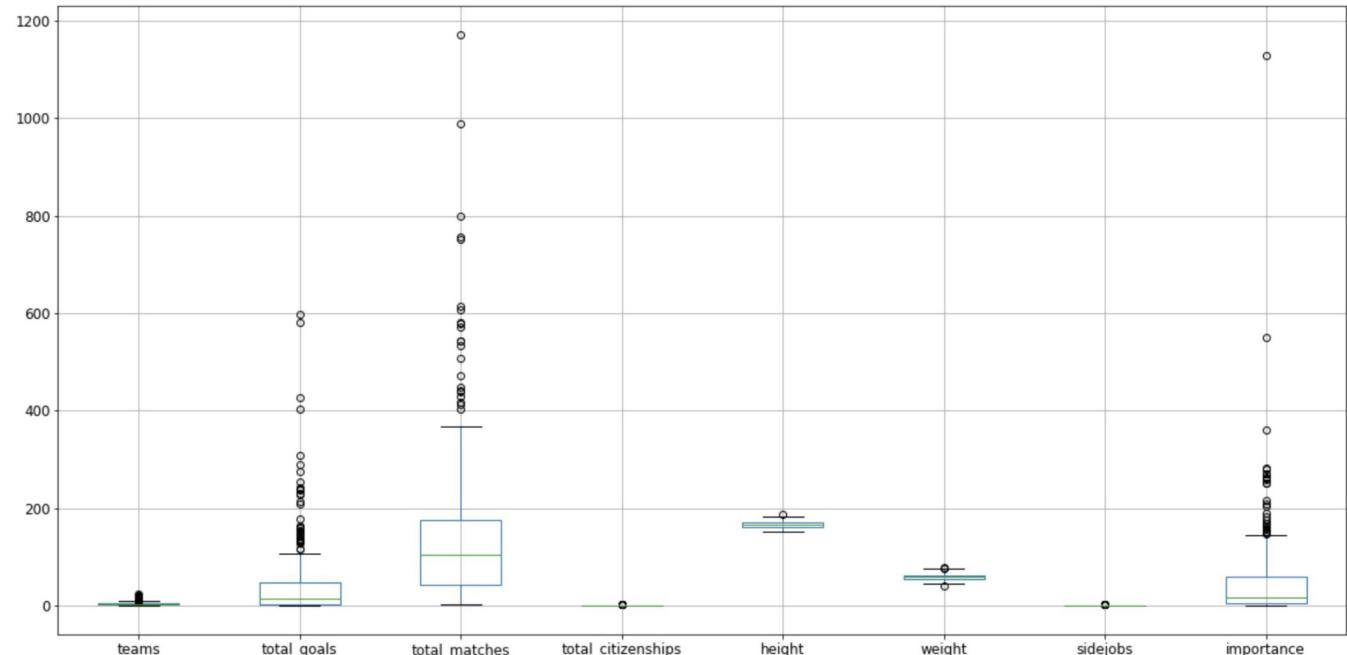

$x_0$	
Min. :	-86.00
1st Qu.:	3.00
Median :	17.00
Mean   :	38.85
3rd Qu.:	51.00
Max.   :	1329.00

# Excursion: Learn How to Read Boxplots

## 4. Analyse the Data

E.g. via python

## Syllabus Questions

- What's the difference: Data, Information, Knowledge, and Wisdom?
- How do we get from Data to Information, from Information to Knowledge, and finally to Wisdom?
- What is Knowledge Discovery?
- What are the goals of Knowledge Discovery?
- Explain the process of Knowledge Discovery.
- Explain Boxplots as a tool for Data Analysis.
- Why do we need a “Data Cleaning” step in Knowledge Mining?
